---

Dear Human Resource Manager

My name is Shuk Liu. For the past 4 months, I stayed in Ireland and looked for a software engineer position with working holiday visa. Even the visa is not strong enough to get a role there, but I got lots of experiences, joined countless meetups and looked almost hundred companies of what they are doing. So I believe Europe internet service company will grow more faster than before. There are many strong candidates in Taiwan , but in Ireland , there are more people talking about cutting-age technologies than Taiwan. That's what I felt of cultural difference and that's why I send this applicant.

I code by some sort of languages like PHP Javascript Python Bash Go C++ Java and have experience in basic DevOp. As a engineer, I enjoy challenge and love to see end-user using what I developed. So, you can say that I aim services on the internet (back-end front-end servers). As getting deeper in software engineer, I see more interesting things how and why they work together. Discussion is the best way to create right things to solve problems. So, I usually like to stay in open space, that's more easier to cooperate and talk with people rather than send a message.

Brief my backgrounds below , include web development , cloud application solution , and game development.

- In web deployment, working knowledge of web application , including back-end and front-end. Have experiences with MVC frameworks , such as AngularJS, ReactJS, Play and Django , at least once or more.

- In the game company, I build game features. I also have some analysis concept(assist analyst) and did A/B testing in this role.

- In cloud solution experience, I dealt with application delivering flow design, how to deploy and scale with each app , avoid HotSpot issue.

If you think I have a good match with the role , please contact and let me  know what you think about me. I look forward a discussion(email will be better in first contact)

Sincerely

Liu, Teng-Yuan ( Shuk )
