Hiring Team & Engineering Leadership
Apple Store Online (ASO) Engineering
Apple South Asia Pte Ltd, Singapore

Subject: Application for Software Development Engineering Manager – Apple Store Online (Role #200664400-3278)

Dear Hiring Manager and Engineering Team,

I am writing to express my strong enthusiasm for the Software Development Engineering Manager role within Apple Store Online (ASO) Engineering in Singapore. With over 12 years of hands-on experience architecting mission-critical distributed systems, leading agile engineering teams, and establishing engineering rigor across global tech leaders—including ByteDance (TikTok), TSMC, and Change Healthcare—I am excited by the opportunity to support the high-availability backend services that empower millions of customer interactions on Apple Store Online daily.

The mission of ASO demands a leader who seamlessly balances high-level architectural vision, people mentorship, and deep execution. My background directly aligns with what you are looking for:

- **Delivering Resilient, Scalable Distributed Systems at Global Scale:** At ByteDance (TikTok PTE. LTD.) in Singapore, I owned the global wallet data architecture and data SDLC roadmap. To meet stringent cross-border regulatory demands and zero-downtime requirements, I redesigned our cross-datacenter communication channels, consolidating fragmented pathways into a unified transport layer and establishing eventual-consistency multi-region data redundancy. This initiative significantly reduced ongoing operational overhead and was adopted as the platform standard across broader business lines.
- **Hands-on Technical Leadership & Software Craftsmanship:** At Change Healthcare, I served as Tech Lead managing an engineering team of 5 engineers while driving hiring across 30+ technical interview panels. With a deep foundation in **Java (Spring Boot, Batch, Data, MVC)** and microservices architecture, I authored foundational frameworks—including a shared EventBus, automated Lambda bindings, and custom Spring Secret Manager plugins. Whether diving into profiling sessions to eliminate latency bottlenecks or reviewing mission-critical pull requests, I foster an engineering culture grounded in domain-driven design, clean architecture, and strict security-by-design standards (KMS, JWT authentication, Fortify remediation).
- **Operational Excellence & Cloud-Native Reliability:** During my tenure at TSMC, I architected the core AI platform services and instituted a disciplined GitOps delivery model using Kubernetes, Istio, and Argo CD. I established uncompromising team standards—enforcing >90% automated test coverage and concise function boundaries—and engineered a high-throughput GPU inference scheduler to maximize hardware saturation under strict latency budgets.

As a Singapore Permanent Resident based locally, I can immediately integrate with the engineering group at Apple Singapore while coordinating effectively across distributed hubs in London and Cupertino. Apple's dedication to uncompromising quality and user-centric engineering mirrors the principles I have championed throughout my career.

I would welcome the opportunity to discuss how my background in distributed systems architecture, hands-on engineering stewardship, and cross-functional leadership can contribute to the ongoing success and scale of Apple Store Online.

Thank you very much for your time, consideration, and leadership.
Warm regards,

Liu, Teng-Yuan (Shuk Liu)
