Hiring Team

OKX

Re: Application Architect, Java

Dear Hiring Team,

I am writing to express my strong interest in the Application Architect (Java) position at OKX. Having spent over 12 years designing large-scale distributed architectures and reliable platforms, I have long admired OKX's commitment to building world-class, high-availability crypto exchange infrastructure. Based in Singapore as a Permanent Resident, I am eager to contribute robust architectural governance and scalable framework design to your engineering teams.

In my recent role as Senior Software Engineer and Tech Lead at ByteDance (TikTok), I owned the wallet data architecture roadmap and data SDLC across global regions. To support strict compliance and multi-datacenter operations, I redesigned cross-datacenter data channels into a consolidated transport and architected transaction data redundancy across regions, lowering implementation and maintenance effort by two job grades. Crucially, I upgraded regional data migration into a generalized, high-abstraction process adopted across multiple business lines, establishing platform properties and standard lifecycle conventions for evolving business architectures.

Complementing this large-scale distributed experience is my deep foundation in the Java ecosystem. During my four and a half years as Tech Lead and Senior Engineer at Change Healthcare, I spearheaded backend architecture across Spring Boot, MVC, Batch, and Data. To standardize services across teams, I architected and built core shared components from scratch, including an EventBus framework, a Spring Secret Manager plugin, and shared Lambda frameworks, while integrating Nginx, Redis, and Elasticsearch. My background spans hands-on Linux system internals, networking I/O, and containerized deployment with Docker and Kubernetes.

With extensive experience bridging distributed system reliability with reusable framework engineering, alongside fluent bilingual collaboration across global teams, I welcome the opportunity to discuss how my background aligns with OKX's architectural goals.

Sincerely,

Shuk Liu
